Top Skills

Application Development
OpenAI API
Software Testing

Certifications

C++ Basics: Selection and Iteration
C++ Programming Fundamentals

Kartik Singh Ghughtyal

Computer Science Engineering Student | Software Engineering with AI Intern @ Masai School | Python • FastAPI • Full-Stack Development • DSA (C++) | Aspiring Software Engineer
Faridabad, Haryana, India

Summary

I'm a third-year Computer Science Engineering student at Uttaranchal University, working toward a career as a Software Engineer with a specialization in Artificial Intelligence. My foundation is Data Structures & Algorithms in C++. I practice consistently — not to chase a streak, but because working through a hard problem until it clicks has genuinely shaped how I think about efficiency, edge cases, and trade-offs. That mindset carries directly into how I approach building software. Alongside DSA, I've been developing as a Full Stack Developer, primarily with the MERN stack — MongoDB, Express.js, React, and Node.js. I've used it to build applications with real authentication flows, REST APIs, and database design decisions — the kind of details that only surface once you try to ship something beyond a tutorial. I care about writing code that holds up: readable, maintainable, and built to scale, not just code that runs. More recently, Artificial Intelligence and Machine Learning have become the direction I want my engineering career to head in. I'm learning how AI capabilities get integrated into real products, and I've started building projects that combine my full stack skills with AI — an area I find genuinely exciting rather than something I'm chasing because it's trending. What connects all of this is a simple approach: I learn by building. Every project is a chance to go one layer deeper into a new part of the stack, a new algorithm, or a new system design decision. I'm early in this journey and I'm honest with myself about that — but I show up for it consistently, and I'm actively working to close the gap between where I am and where I want to be as an engineer. I'm currently looking for Software Engineering internship opportunities where I can contribute meaningfully, learn from engineers ahead of me, and grow into a well-rounded SDE. If you work in software engineering, AI, or full stack development — or you're a fellow student on a similar path — I'd genuinely like to connect and learn from your experience.

Experience

Masai
Student Intern
July 2026 - Present (2 months)

The Software Engineering with AI Program is a comprehensive training program that combines traditional software engineering principles with modern Artificial Intelligence technologies. Throughout this internship, I am learning how to build scalable web applications, design secure backend systems, integrate AI models into real-world products, and use AI tools to improve software development productivity.

The curriculum covers Python programming, web technologies, backend development with FastAPI, REST API development, databases, authentication, frontend integration, OpenAI APIs, prompt engineering, AI-assisted software development, LLMOps, multimodal AI, testing, deployment, and the development of an end-to-end AI-powered capstone project. By the end of the program, I will be capable of designing, developing, deploying, and maintaining production-ready AI applications using industry best practices.

Education

Uttaranchal University
Bachelor of Technology, Computer Software Engineering · (August 2024 - May 2028)
